SUMMARY

Full Stack Web Developer passionate about the creative aspect of developing and improving user centric content. Strong work ethic and proven ability to work effectively within a team and independently to achieve core objectives of a company. Consistent top performer utilizing problem solving skills to facilitate organizational growth.

PROFESSIONAL EXPERIENCE

Full Stack Development Bootcamp, Austin, TX

Student, 2020-2021

Insomnia Burger
I created a copycat Burger application primarily using handlebars. The user interface was created with CSS, and the functionality of the application was made with Java-script and jQuery. MySQL was the database used to store and return the user's input. I was able to return the users results by using the GET, POST, and PUT methods. I also sent up the routes for the frontend as well as the backend.

MVP Library
I was responsible for all the User Interface. I used a combination of Materialize and Bootstrap to create the styling for the pages. I set up front-end routes and created the user authentication using passport. I also served as the project lead, and the roles of each member of my team.

DogBlogg
● I designed the User Interface. I used Bulma as well as some CSS tricks that I learned. I implemented an infinite carousel, using Reacts syntax in order to pass in the information. I created the About me, navbar and the home page by importing Bulmas documentation into my Package.JSON and referencing it within my react application.
